Serum Handler Knob

## A complete range to equip

Schools and Institutions

Hospitals, Clinics and healthcare facilities

Public transportation and buildings

100% recyclable material

abevia® products range manufactured with , antimicrobial copper alloy (COFRAC accredited laboratory)

## The contact surfaces that protect the Human

- 80% of infectious diseases in hospitals are transmitted by touch.
- Frequent hand-washing and surface disinfection are not enough as the number of hospital acquired infections continues to rise each year.
- Studies have shown that copper alloy can reduce harmful micro-organisms by up to 95%.
- When used as touch surfaces, copper alloys reduce infections by 40%.

### Advantages of the abevia® products range

#### Antimicrobial properties

Our products are made from the antimicrobial copper alloy 

- Efficient against numerous micro-organisms including antibiotic resistant bacteria
- Reduction with a factor of 5 of micro-organisms levels compared to plastic

#### Sturdiness

High mechanical properties of the alloy: product designed for intensive use

#### Tamperproof

No visible assembly system

### Advantages of copper alloy

- Scientifically proven antimicrobial properties following in vitro tests in COFRAC accredited laboratory and in situ tests in hospitals
- No chemical additive required: oils, waxes, gloss, paints and other coatings must NOT be applied
- Life span: No long term tarnishing
- Resistant to cleaners and sanitizers
- Contains no lead or nickel
- 100% recyclable material

## Products of the abevia® range

Door handles, finger plates, push plate, furniture handles and knob, single switch, IV poles thumbwheel

## Technical description

#### General

Solid moulded product  
"Champagne" color  
Polished/satin finish

#### Specific to door handles

Secured set with springs  
Designed following grade 3 EN 1906
